

Top 3 Trends That Are Reshaping Construction Estimation—Are You Ready?

HONTREL
TECHNOLOGIES

The construction industry is undergoing a digital revolution, but estimation processes often lag behind, costing companies time, money, and opportunities. With increasing project complexity and competition, relying on outdated estimation methods is no longer sustainable.

This newsletter explores the top trends reshaping construction estimation, the challenges companies face, and how a CPQ (Configure, Price, Quote) application can help your business stay ahead of the curve.

The Challenges in Construction Estimation

- **Manual Processes:** Spreadsheets and manual data entry are error-prone and time-consuming, leading to delays and inaccuracies.
- **Fragmented Data:** Teams work in silos, creating inconsistencies in estimates and tender submissions.
- **BOM Complexity:** Managing multi-level Bill of Materials (BOMs) for large-scale projects becomes a logistical nightmare.
- **Customization Bottlenecks:** Generating client-specific estimates and multi-currency pricing takes too much time.
- **High Costs:** Traditional ERP systems offering estimation tools are expensive and lack flexibility.

Top 3 Trends in Construction Estimation:

- **Automation Driven:** Automation is transforming estimation processes by reducing manual tasks and improving accuracy. AI-powered tools analyze data trends to provide smarter, faster, and more accurate estimates.
- **Centralized Digital Platforms:** Companies are moving to centralized platforms where all data—BOMs, revisions, pricing templates—is easily accessible and shareable across teams. This reduces miscommunication and streamlines workflows.
- **Customization and Client-Centric Solutions:** Businesses are prioritizing tools that allow for tailored estimates, multi-currency pricing, and fast generation of professional quotes. Clients expect personalized service, and technology makes this possible.

How a CPQ Application Solves These Challenges:

Streamlined Estimation: Automate multi-level BOM creation and pricing, reducing repetitive tasks by up to 75%.

Centralized Data Management: Keep all project data in one place, enabling seamless collaboration and revision control.

Quick and Accurate Quotations: Generate professional, customized quotes in minutes, complete with templates and technical details.

Cost-Effective Solution: CPQ applications cost significantly less than ERP systems while offering industry-specific features.

Conclusion: Are You Ready for the Future?

The construction industry is changing rapidly, and the way you manage your estimation process can make or break your success. A CPQ application equips you with the tools needed to stay competitive, streamline workflows, and deliver exceptional value to your clients.

Take the first step today. Contact us for a free demo and see how a CPQ application can transform your estimation and tendering process.

Hear it From Our Customers:

"IEHUB's capabilities have completely transformed how we manage our estimation process. Tasks that took hours now take minutes, and the accuracy is unparalleled. Our team is more productive, and we've never been this confident in meeting RFQ deadlines. IEHUB has become an indispensable part of our workflow."
