

Digital Engineering is No Longer Optional – It's the EPC Industry's Survival Kit for the Pre-AI Era

HONTREL
TECHNOLOGIES

The construction and EPC industry is standing at a crossroads. As the demands for precision, efficiency, and speed intensify, traditional methods of estimation and project management are proving inadequate. The costs of outdated processes are mounting, and the industry can no longer afford to ignore the transformative power of digital engineering.

The Problem: Bleeding Time and Money in the Estimation Process

Estimation woes in EPC projects have become a silent drain on profitability:

- **Disorganized Data:** Fragmented project data leads to manual errors and inefficient workflows.
- **Delayed Estimates:** Lengthy manual processes slow down tender responses, causing missed opportunities.
- **Costly Mistakes:** Inaccurate estimations result in budget overruns and strained stakeholder relationships.
- **Missed Insights:** Lack of historical data usage for predictive analytics results in poor decision-making.
- **Limited Scalability:** Legacy systems fail to support complex multi-level BOMs and large-scale project needs

The Solution: Digital Engineering Through CPQ

Adopting a **Configure, Price, Quote (CPQ) application** integrated with digital engineering principles empowers companies to address these pain points head-on.

How Digital Engineering Transforms Estimation:

- **Precision at Scale:** Automate multi-level BOM creation, ensuring detailed, accurate estimations every time.
- **Speed and Efficiency:** Generate quotations, submittal packages, and pricing in minutes, not days.
- **AI-Driven Insights:** Leverage historical project data and predictive analytics for informed decision-making.
- **Standardized Workflows:** Simplify complex tasks like datasheet linking, catalog management, and compliance adherence.
- **Global Flexibility:** Seamlessly handle multi-currency pricing and region-specific standards.

The Benefits of Going Digital

EPC companies using CPQ applications have reported:

50% Faster Tender Submissions: Gain a competitive edge by responding to bids promptly.

30% Reduction in Costs: Eliminate repetitive tasks and reduce errors with automation.

Improved Client Satisfaction: Deliver precise, professional proposals tailored to client needs.

Enhanced Team Productivity: Free your teams to focus on value-driven tasks instead of manual data entry.

Why Now?

According to industry insights, companies that invest in digital transformation today will be twice as likely to meet their profitability targets by 2030. As the industry shifts towards automation and AI-driven solutions, adopting digital engineering is no longer optional—it's essential for survival.

Are you ready to take your estimation process to the next level? Let us show you how our CPQ application can help your business thrive in the pre-AI era.

Let's start building your digital foundation today!
